Continuation Sheet (PTOL-303)

Application No.

Continuation of 3. NOTE: Since the including the limitations of claim 2 into the claim 1 changes the scope of claim 1, additional consideration of the claim is required.

Continuation of 11. does NOT place the application in condition for allowance because: With respect to claim 1, Applicants argue that the Examiner's statement that the "distinct middle height portion" is not required by the claim is incorrect because portions of the article have been described separately. However, the separate description of portions does not preclude the portions from being physically integral. Applicants further argue that a round shape does not teach a stepped configuration based upon abstract geometric principles. However, the fact that any curved shape can be considered as composed of distinct elements (steps) belongs to the common knowledge in the art, and therefore and therefore, it would have been obvious top those skilled in the art at the time the invention was made to use the steps-shape of the absorbent core as an obvious design choice, and as such it does not impact the patentability of claim (MPEP 2144.03 (A-E)). Applicants further argue that grooves with the equal height walls provide improved liquid retention n comparison with the grooves with different height walls as disclosed by the reference.

However, since the improvement of the liquid capacity has been physically defined by the smaller wall only, and therefore the fact if the walls are equal or different in height is the matter of an obvious design choice.
